Heavy duty drawer rail, galvanized steel, 120kg

Extra strong drawer rail with bearings, and full extension. The drawer can carry 120kg in pairs. Easy to mount, as the last section can disconnect.

The drawers are sold as 1 pcs. at a time!

Extra strong drawer rail with bearings, and full extension. The drawer can carry 120kg in pairs, enough for extra high loads.

The rail is easy to mount, as the last section can disconnect.

There are mounting holes along the length of the tracks. The holes on the inside are countersunk, and fits M5 bolts or similar wood screws. The oblong holes are for momentary mounting, so you can adjust the drawer before fastening.

The rails can be extended to double their length - This means that the model of, for example, 500mm can move a drawer 500mm from its original position. The number is thus also an indicator of how much movement/distance you can get.
