W3W / W5W Matronics LED Dual Color bulb - 12V

Bright dual color W5W LED bulb with 6xLED for 12V, that can emit two colors. Fits in to standard W5W sockets.

Bright dual color W5W LED bulb for 12V, that can emit two colors. Fits in to standard W5W sockets. Gold-coaated terminals ensure a good connection.

The bulbs are sold in sets of 2 bulbs.

Easy color change

You change between the two color by switching plus and minus on the bulb. This can be done by connecting a controller that can reverse the polarity. You can connect multiple bulbs to same controller.

There is also a US-light controller in production that allows the bulb to light white or white for position light, and automatically swap to yellow for the indicator light.

The last option is that you turn the bulb in the socket manually, in case you only want to change colors periodically.

Dual Color US light controller

The controller makes it possible to use the bulb as eg. indicators. See more details on the Dual US Light controller product page.

Color change controller / Polarity flipper

The controller makes it easy to swap plus and minus, which makes it possible to swap the color on these bulbs.
