Serie 40 - Automatic connector

Screwed in to the end of a track on a series 40 profile, where after the included bolt is put through and used for fastening.

Screwed in to the end of a track on a series 40 profile, where after the included bolt is put through and used for fastening, eg. with a sliding nut or spring nut.

The connector has a flat end that is put in to the track, where after you turn the connector in. Notice that the thread is reversed. There is a hexagonal head on the indside, and you can use a powerful drill to turn it in, eg. with low speed / gear.
