# Mastik sealant tape - 30mm x 360m

Waterproof and electrically insulating material, that is used for sealing joints between cables. Easy to apply.

Waterproof and electrically insulating material, that is used for sealing joints between cables.

It is delivered in a form of a 30mm wide and 2mm thick tape, that is 36cm long, but the material is best compared to chewing gum, and can be stretched and shaped around cables and joints. This makes it easy to avoid cavities and openings beween cables, that shrink tubing by itself cannot close.

The taped joints has to be covered by a shrinktubing afterwards.
