Complete AMP MCP 2.8 connector

Complete set consisting of a connector, 2 terminals and 2 rubber gaskets. Fits wires from 1.0mm2 to 2.5mm2.

Complete set consisting of a connector, 2 terminals and 2 rubber gaskets. Fits wires from 1.0mm2 to 2.5mm2.

These connectors are used in newer vehicles, such as cars and trucks.

You can use these connectors for connecting to existing wire harnesses, change harnesses, or for making your own waterproof connections.

Strain relief

You can secure the cable with a cable tie through the strain relief. It can also be used for connecting a NW8.5 tube to the connector.

Crimping tools

Notice that you need the fitting crimp-tooling. The terminals are compatible with tooling for Superseal 2.8 connectors. We recommend this crimping tool, which we also use in our own production.
