Serie 20 - End fastener

Prevents turning of the profiles in a 90-degree joint, so that the bolt does not loosen itself.

Clever clamp for series 20 profiles, that is used in 90-degree joints of two profiles. You will need a M5 bolt with round head to use this clamp.

The clamp is bolted on to the end of profile 1, where after your side profile 2 in over the clamp. The bolt is then fastened through profile 2 by using a access hole.

As the clamp is inserted in to both profiles, this prevents the profiles from twisting, and thus lostening the bolt.
