Serie 30 - 45 degree end-bracket

Bracket for joining two series 30 profiles in a 45 degree angle. Bolted on to the end. Cover for nice finish included.

Bracket for joining two series 30 profiles in a 45 degree angle. You cut thread (M8) in the end of the profiles, and the bracket is bolted on to the ends. The small metal pieces are put in to the bracket, where they go in to the profile, and prevent the bracket to be twisted / rotated.

A black plastic-cover for nice finish included.
