Adapter cable, 4-pins to 2-pins

Adapter cable from 4-pins to 2-pins so that LED high-beams with 4-pins can be connected to our wiring harness.

Adapter cable from 4-pins to 2-pins. That makes it ideal for use with our LED high beams with dual color position-light in conjunction and connecting with our wiring harnesses for LED work lamps and high beams with relay and switch.

The adapter cable has a length of 15cm. On the 2-pin side, you can easily connect our wiring harnesses to the high-beam on our high-beam lamps, while the position-light has to be connected separately by the extra cables, yellow and white for yellow and white position-light respectively.
