LED lightbase for bars on Volvo 2020+ - Dual Color

Lightbase for the diagonal lines, on the sides of the Volvo-logo. The original lines fits in to the base, where they are glued in place.

Light base for the slanted diagonal lines on the sides of the Volvo logo. The original lines fit into the base where they are glued.

Note that there are different lengths depending on the model/year. Measure the length and check if both are 435mm or 388/375mm, as they otherwise won't fit in this base.

The base is made of the same diffuse white plastic as the light base for the emblems.

The original lines are not included. However, they can easily be unclipped from the truck. The light base should be glued onto the truck; double-sided tape could also be used.

Connection

The built-in dual-color light is connected as follows: The light bar turns on the color assigned to minus, while the brown is set to plus. This allows you to connect the light base as such:

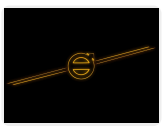

- Brown: Plus
- White: Minus for white light
- Green: Minus for yellow light
