Adapter for positionlights in indicators for Volvo FH 2012-2020

Adapter for the indicators above the headlights. Turns the indicators on with a low brightness, so they work as position lights.

Simple adapter for the indicators above the headlights. Inserted between the original wire harness and the lamp, the last wire is connection to position lights.

The adapter turns on the indicator on low brightness when powered, and thus makes the indicator work as a position light. When you turn on the indicators, it goes up to full brightness as usual.

Original connectors are used on the adapter, so there are no changes needed on the original harness. You only have to connect the position light wire, which is 5m long.

Notice that the indicators are not approved as marker lights.
