Matronics Poppy holder / stand - transparent

Transparent holder for Poppy air freshener, equipped with suction cups for mounting on the windshield or other surfaces. Can also be secured with screws.

Poppy Stand in Matronics design, with suction cups for easy attachment to the truck windshield or other surfaces. Made of transparent, colorless plastic, so you can still maintain visibility through the windshield.

Our own design is made to have the smallest possible size while being available in various angles, allowing it to fit perfectly on the windshield without the Poppy appearing crooked.

The stand includes 3 suction cups and 3 nuts for mounting. You can also choose to screw the holder onto a surface.

It might be neccesary with some silicone glue on the suction cups, as you otherwise will have to push them in periodically after some time.

Sold individually.
