LED conversionkit for Mercedes Arocs +2022

LED conversion kit for Mercedes Arocs 2022+. Change the DRL from Xenon white to yellow, warm white, and golden yellow.

LED Conversion Kit for Mercedes Arocs from the year 2022 onwards. With this kit, you can change the light color in the LED daytime running lights from standard Xenon white to yellow, warm white, and French yellow.

The kit consists of 2 LED light sources for the right and left headlights, and includes thermal paste for installation. The light sources have original connectors, making them easy to replace and connect. The replacement takes ½-1 hour.

Installation

The circuit boards are mounted on heat sinks, which can be accessed from the back of the headlights. The easiest way is to completely remove the headlight from the truck.

- Remove the heat sink.
- Disconnect the plug from the light source.
- Loosen the screws securing the circuit boards.
- Remove the original circuit board.
- Apply thermal paste to the new circuit boards.
- Screw the new light sources onto the heat sink, and reassemble everything.
