Silicone Soldering Mat

Versatile silicone mat for soldering. Heat resistant up to 450 °C, with non-slip base and magnetic zones for precise, safe repairs.

Gain full control over your tools while soldering with this versatile and flexible silicone mat, which makes soldering, repairing, and crafting both easier and safer!

With its non-slip surface, it creates a stable foundation for precision tasks such as repairing smartphones, watches, glasses, cameras, or even the finest model work. It is not only practical but also heat resistant up to 450 °C, allowing you to safely place your soldering iron on the mat without worrying about damage to your workbench.

The mat's 4 magnetic areas and 6 grooves with raised edges ensure that small, important parts like screws and screwdrivers stay where they should—no more rolling away! For extra organization, there are 3 practical, numbered compartments with lids for keeping track of small parts and accessories.

The built-in ruler on the bottom edge ensures precision is always at your fingertips, whether you are soldering, repairing, or building.
