Matronics light source for VW Audi Seat Skoda interior light, 12V

Upgrade your VW Audi Seat or Skoda' car's lighting with a stronger light source. Multiple colors

Our light source makes it easy and affordable to upgrade the lighting in your VW Audi Seat or Skoda. Instead of buying a completely new lamp, you can simply disassemble the old one and replace the light source inside, without altering the car's original appearance.

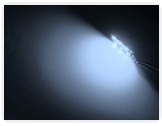

The new light source has 6 LEDs, that provides a much stronger illumination, and you have the option to choose a different light color than the original white.

Montering

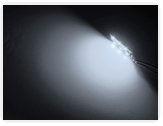

Inside the connector, you can use a small screwdriver to press a little locking tab, allowing you to flip off the black back cover. The old circuit board is removed from the housing, and the new one is inserted in the same way. Then simply press the black back cover down again, and it will click into place.
