Waterproof Auto / Universal Relay with Base

Waterproof SPDT relay with included base. Durable design, easy installation, and suitable for universal use.

Waterproof changeover relay that activates when power is applied. This durable relay is ideal for demanding environments where moisture and dirt may be a challenge. It can be used as a working relay for lamps and other electrical components.

The relay is of the SPDT (Single Pole, Double Throw) type, meaning it has a common input (COM) and two outputs: one that is active when the relay is off (NC – Normally Closed) and one that is active when the relay is on (NO – Normally Open).

The NO terminal is rated for 40A, while the NC terminal is rated for 30A. So if the relay is only used for switching on a load, it can handle up to 40A.

The relay comes with an included plastic base, only designed for the waterproof relays. The base has pre-mounted wires on the terminals, ensuring quick and easy installation.
