Matronics Emitter for SIM toplamp

LED light source that replaces the original BA15 bulb holder in SIM top lamps. 6 LEDs provide a beautiful light with good light distribution.

Installation is quite simple, as the original bulb holder is mounted with two screws. Remove the bulb holder, and install our light source with the same screws.

There is a 10 cm wire on the light source, and there is space at the back of the lamp to make the connection.

Dual color

The dual color model changes color when you switch the plus and minus. This can be done with a two-pole switch, or you can use our polarity switch.

We also have a Dual Color US light control if you want to use the lights as both position and turn lights.

The dual color model has wires that match the light color. For example, if the yellow wire is connected to plus, and the other to minus, the lamp lights up yellow.
