Matronics Light Source for Michelin Man on Wheel

Compact 24V LED light source fitting a 19 cm Michelin Man, easily mounted in wheel.

Compact LED light source for indoor use, that fits the 19cm Michelin man sitting on a wheel. The emitters are dual color, but you do not have to use the color switching, and you can decide it just lights one color.

Each light source contains 6 powerful LEDs

Mounting

Installation is quite simple; you only need to drill a minimum of a 15 mm hole in the center of the base. The light is then glued in place with the premounted double adhesive tape, and finally connected to power.

Note that for older Michelin Men, it's necessary to drill a hole further in to fully insert it into the Michelin Man.

Color Change

Color change can be achieved with a switch, a two-pole relay, or one of our Dual Color Controllers. You can also just decide, that it only needs to light up in one color.

The simplest solution is the Dual Color switcher, which changes color upon receiving a signal.
