Matronics LED emitter for Scania ceiling lamp

Powerful set of LED light sources replacing the original bulbs in the ceiling lamps of all newer Scania trucks.

Powerful set of LED light sources replacing the original bulbs in the ceiling lamps of all newer Scania trucks. The lamp primarily provides neutral white reading light and a colored cabin light.

It is a complete set, both for left and right ceiling light.

Neutral white / red

The red cabin light comes from 6 powerful LEDs that provide a nice light throughout the cabin, and it dims together with all the other red lighting in the cabin.

Everything connects via the attached connector. It is pure plug-and-play, and you do not need to cut or splice any wires. The reading light also uses 6 powerful LEDs that provide a neutral white light. Both lights can be turned on at the same time.

Neutral white / RGB

The cabin light comes from a total of 12 powerful LEDs that provide a nice light. The cabin light connects to a standard RGB controller, where you can choose colors and adjust brightness.

It is controlled exclusively with a remote control and not through the truck's functions. There are 4 colored 1 meter long wires that must be connected normally to the controller: red, green, and blue to negative, and grey to common positive.

The reading light connects via the attached connector. It is pure plug-and-play, and you do not need to cut or splice any wires here either. The reading light uses 6 powerful LEDs that provide a neutral white light. Both lights can be turned on at the same time.
