Connection

The strobe controller is fairly easy to connect, as shown below:

- White = Synchronization with other Prostrobe devices
- Red = Plus warning light (12V-24V)
- Black = Minus / Ground
- Yellow = Flash pattern / program on minus.

The output of the controller has only a red and a black wire, corresponding to plus and minus.

Flash Pattern

When the yellow wire is pulsed to black (minus / ground) for less than 1 second, you switch between the 26 different flash patterns/programs.

With a pulse between 1-3 seconds, you switch to the previous flash pattern/program.

With a pulse of more than 5 seconds, the flash pattern/program is turned off. When you reconnect the LED lamp to power, it will continue with the previously selected flash pattern/program.
