LED DRL conversion kit for Valtra T, N, Q-series

Complete conversion kit for Valtra T, N, and Q-series, to replace the cold white LED DRL light. Simple to replace.

Complete conversion kit for Valtra T, N, and Q-series with LED headlights to replace the cold white LED DRL light. The bright high power LEDs give you plenty of light. They are mounted on an aluminum plate like the original, which ensures optimal cooling and extended lifetime on the LEDs.

The connection is pure plug&play with the build-on adapter-plug, which is easily connected to the original plug.

Each set contains two boards, one for the right and one for the left, as well as heat conductive paste for increased heat transfer.

Notice that the emitters are not ECE-approved.

Mounting

It is relatively simple to mound the single color emitters, eg. yellow, where it takes about ½ hour per lamp the first time.
