Adapter cable for position lights in indicators - Valtra T, N, Q-series

The adapter for the indicators allows you to turn on the turn signal in a dimmed mode, so it functions as a position light.

The adapter is connected before the turn signal and is connected to the position light. The adapter allows you to turn on the turn signal in a dimmed mode, so it functions as a position light. When you signal, the turn signal lights up at full brightness.

The connection does not take long.

The input has 3 wires:

- Red Plus
- Black Minus
- Yellow Plus position light

The output has 2 wires:

- Red Plus
- Black Minus

Currently, it requires cutting the wire before the lamp plug and connecting the correct plus/minus. The last yellow wire is connected to the plus from the position light.
