XBB Smart Relay kit - dongle and relay

Make the installation of auxiliary lights much easier with the XBB smart relay kit and avoid cutting wires and CAN-bus errors.

XBB Dongle® and XBB PowerUnit® make installing auxiliary lights on modern vehicles both easy and safe. You can find compatible vehicles here. Not all new cars are represented, so ensure your car is on the list before buying.

Since newer vehicles often do not allow traditional installation using a relay and high-beam trigger, the XBB system provides a smart solution based on the vehicle's OBD2 diagnostic port – without any direct interference with the CAN-bus network.
