Matronics LED kit for ceiling light in DAF XG 2021+

LED emitter with 3 bright LEDs each, that replace the original emitters, that only have white light. Available in red.

LED emitters with 3 bright LEDs each, that replace the original LED emitters, that only has white light. The default lamp is red, but can be customized to order.

The original ceiling lamp is removed and opened. The glass and reflector are taken out. The reflector is firmly secured in its six anchor points, therefore we recommend using our disassembly kit or a similar tool for removal. The original LED boards can then be easily unplugged and removed.

The new LED boards click directly into the same positions as the originals. Please note that all three boards have different sizes/lengths and must be installed in the correct order. Our light sources are numbered 1, 2, and 3. Reassemble the lamp – done.

The original reading light (the large black circuit board) remains unchanged.
