H7 Osram Night Breaker SPEED kit, +450% 2 pack, E-approved

Revolutionary E-approved OSRAM H7 LED lamps that replace halogen bulbs 1:1.

Revolutionary E-approved H7 LED bulbs from OSRAM. The smart thing about the SPEED series is that it replaces a halogen bulb on a 1:1 basis – but with LED technology that delivers a modern look, improved visibility, and increased safety.

*In the overview HERE you can see Osram's list of approved vehicles for LED bulbs. At the next periodic inspection, you can advantageously have the bulbs entered in the car's papers as a constructive change.

The bulbs have an expected lifespan of 3,000 hours, which is up to 6 times longer than standard halogen bulbs.

High light output

Up to 450% more brightness – significantly improved illumination.
Beam range of up to 240 m in low beam. Light output is 1550 lumens nominal per LED bulb. The light color is 6000K, corresponding to the color of xenon kits.

Mounting

The future-proof 1:1 design is virtually identical to halogen lamps.

Unlike other LED bulbs that require more space than standard halogen bulbs, you can expect far fewer installation challenges with the SPEED series. It is true plug-and-play.

Additionally, no adapter is required to secure the bulb in place.

CANBUS

On newer cars/trucks, it may be necessary to purchase CANBUS kits separately to avoid error messages from the vehicle's bulb monitoring system. This is simply a small module supplied with suitable connectors for installation between the vehicle and the LED kit's power supplies. The kits are complete with 2 units.
