LED DRL conversion kit for New Holland T-series

Complete conversion kit for New Holland T-series, to replace the cold white LED DRL light. Simple to replace.

Complete conversion kit for New Holland T-series with LED headlights to replace the cold white LED DRL light. The bright high power LEDs give you plenty of light. They are mounted on an aluminum plate like the original, which ensures optimal cooling and extended lifetime on the LEDs.

The connection is pure plug&play with the build-on adapter-plug, which is easily connected to the original plug.

Each set contains two boards, one for the right and one for the left, as well as heat conductive paste for increased heat transfer.

Notice that the emitters are not ECE-approved.

Mounting

It is relatively simple to mount the emitters, it takes about 10 minutes per lamp the first time.

- Disconnect the plug from the headlight located on the large heat sink.
- Unscrew the heatsink from the headlight.
- Remove the original emitter by loosening 4 screws.
- Unmount the original plug from the heatsink
- Mount the new plug with wires.
- Install the new emitter - remember the black plastic.
- Connect the small white plug to the light source.
- Connect the original plug and test.
- Attach the cooling plate.
