Fendt adapter-cable for positionslight in indicator at rear fender

Adapter for turn signal at rear fender, so that it also serves as position light, with dimmed brightness.

Simple adapter with original connectors that connects to the turn signal and position lamp at the rear fender, which normally lights up with a white position light. It then uses the yellow turn signal as a position light with reduced brightness. The brightens goes back to maximum when the turn signal is activated.

As it takes the signal from the white position light, no other changes are required. The plug is removed from the lamp, and the adapter is inserted in between.

It may cause error messages for the turn signal, but the error can be cleared after the first blink and does not reappear until the tractor is turned off again.
