Digitalt LED lightstrip, RGB

Smart digital light strip so you can control sections individually and create cool effects

Digital RGB control from 5V to 24V, which can be used for digital RGB products such as digital RGB LED light strips. You can control light color and effects with the wireless remote control or download an app for smartphone and tablet. The range of all controls is max. 30 meters.

Controller

The controller measures only 56 x 21 x 12 mm. There is a DC jack for the input power, and an 8 cm cable with connector for the light strip on the output. The controller can handle up to 5A or a maximum of 600 sections.

The controller remembers the settings, so when you turn off the light and turn it on again, it starts up in the same setting as before.

Remote Control

The remote control is very compact and measures 103 x 45 x 8.5 mm. It uses 1 piece of 2025 button cell battery (included). You can see what each button does on the illustration of the remote control.
