Light Source for IVECO S-Way Ceiling Light

LED emitter with white and red light, that replaces the original in the IVECO S-Way ceiling lamp, which has white and blue light.

LED light source that replaces the original in the IVECO S-Way cabin ceiling lamp. The original features white and very faint blue light, while ours offers white and bright red light. Upon request, they can be manufactured with other color combinations.

The light sources are sold individually. There are two lamps in a IVECO truck, so you will need two pcs. for one truck.

Installation

Installation is quite simple, with no electrical modifications, as the board uses the same connector pins as the original.

- The lamp is removed, and the front glass clicks out. This can be done easily by twisting the lamp slightly on the thin edges.
- The original board is secured with two plastic studs in the middle, which can simply be clipped away.
- 4 plastic legs hold the board down, and they can easily be flipped out, allowing the board to sit loosely.
- The new board is inserted, and the legs are pressed in again.
- The glass is put back on, and the lamp is reinstalled.
