Matronics Splitter for Scania rear lamp - Position light and reverse light

Smart splitter cable with separate outputs for position and reverse lights, making it easy and safe to connect additional lighting.

mart splitter cable that provides separate connections for both position lights and reverse lights, making it easy and safe to connect additional lighting. The splitter is fitted with DIN 72585 connectors on both the input and output, and all electrical connections are fully moulded for reliable protection. All original signals are passed through.

There is 1 metre of cable between the connectors, plus 1 metre of cable for both the position light and reverse light outputs.

The splitter can be connected anywhere in the rear light wiring where DIN 72585 connectors are used.

Wiring:

Position light

- Black: Positive (+)
- White: Negative (-)
