Yellow 3W LED Bulb -12V (21/5 Watt) 7443

A powerful 7443/W21/5W bulb with 1 piece 3 Watt yellow diode. It is typically used as run/turn signals.

A powerful 7443/W21/5W bulb with 1 piece 3 Watt yellow diode.

This bulb is used as run/turn signals, where all the diodes are lit all the time with a brightness that fit respectively to 5 or 21 Watt.

Note: Switching the turn signals bulb with a LED bulb will result in the light blinking faster as usual. You will therefore need to use cheat resistors, which use the same effect as an ordinary light bulb.

Total length is 40 mm.
