Gylle Cold White/Red LED Marker Light - 12V-24V

LED side marker with cold white and red light.

A marker-lamp from the swedish Gylle with a rubber base and light sources in the colors - cold-white and red. The light sources are pressed into the base in such a way that you can yourself make a right lamp and a left lamp. The light sources are of course E-approved and thus also the entire marking lamp.

There are 6 powerful LEDs in each light and a 5 metres cable on the back that can be put through the rubber base.

A long model

The gummy base has a length of 195mm and the light sources have a diameter of 61mm when seated to the head of the gummy base, which itself has a diameter of 80mm.

The mounting surface has six pre-drilled holes, so you can choose how it is mounted. The surface is 100 x 50mm.

A short model

The gummy base has a length of 110mm and the light sources have a diameter of 61mm when mounted. The head of the gummy base is the same size as on the long model with a diameter of 80mm.

The mounting surface has the same 6 holes as the long model with the same hole-spacing, however the surface is a bit less - only 95 x 48 mm.
