Star LED, Double - Sided Tape

A double-adhesive and heat conductive tape that can be used to attach the High Power LEDs to a cooling surface.

A double-adhesive and heat conductive tape that can be used to attach the High Power LEDs to a cooling surface.

After the diode is attached to the cooling surface, you must press them together for 30 seconds to ensure they sit properly together. This is done most easily with a lens-cap over the diode.

The diode will sit securely stuck in the tape, but it is still possible with significant strength, to drag it by the tape.
