MR11 bulb 21xLED, AC/DC24V

For replacement of halogen light bulbs in the cabin with low power consumption

For replacement of halogen light bulbs in the cabin with low power consumption

There is a built-in voltage regulator so that the LEDs are protected for over voltage, this gives you also a longer life.

Operating voltage: 24-30Volt ac/dc
1.00 ~ 1.80 watts (35 ~ 65mA)

In a few cases it may be necessary to fix a minor adaptation of the snap ring that holds the bulb in place up in the lamp.
However, it is something you can easily cope with an uneven bite, since the ends of the retaining ring is facing with the Middle, and they must be 2 mm shorter.

The pears are measuring ø35mm
