LED Parking Light Emitter for HELLA Lamps

Change the colour on a wide range of HELLA ' lamps with built-in LED parking lights.

Change the colour on a wide range of HELLA ' lamps with built-in LED parking lights. We have developed an universal replacement for the original LED parking light on a wide range of Hella´ spotlights, including Rallye 3003, Luminator and Jumbo 320FF.

The board does not have quite the same look as the original, but it has the same overall shape, so it is mounted securely, without modifications to the lamps. The PCB is protected against moisture damage with a special varnish.

Dual color model

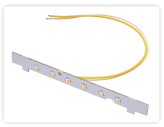

With the dual color model, it is possible to change between two different light-colors. Typically it will be Yellow / White that makes sense. The color is changed by swapping plus and minus. This can be done with a switch or a color-changing controller.

We point out these products are only suitable for show use and are not permitted/approved for public roads.

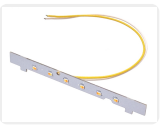

The PCB works on both 12V and 24V lamps. The power consumption is 1.4W.
