Bardolino Plastic Front

A plastic front for installation on our aluminium rails. It gives a nice touch, distrubutes the light and protects the SMD-tape from dirt.

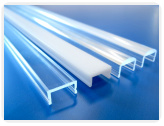

A smart plastic front for installation on our aluminium rails. The front kicks into the rail from the side and can, for example hold in place with our end caps.

The front gives a nice touch and especially the matte front helps to distribute the light. At the same time it protects your SMD-tape from dirt and arrow-fingers.

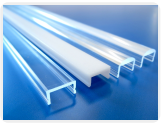

The round front will be 3mm over the edge of the rail when installed in.
The Bardolino aluminum rail and round front will thus be 16mm high.
