T1 / T3 Wireless RGB & Dimming controller - 12-24V

Intelligent RGB controller, that is controlled by a T3 remote. The controller has many functions and possibilites.

Intelligent RGB controller, that is controlled by a T3 remote. The controller has many functions and possibilites.

The fixed voltage models sends out the same voltage as the one connected to. That means that if you connect it to a 12V supply, you can use it for 12V SMD strips.

There are screw-terminals in both input and output for easy assembly.

The controller works with T3 and T3M remotes. Pairing the remote and the controller is very simple. Push the "Address setting" button on the controller, and then push the remote right after.
