T4 RGB + White System - 12V / 24V

An advanced remote and a controller for RGB+White color control for 12V and 24V products. Zones and other advanced functions.

A remote that is used for T4 controllers. The T4 remote can manage all T4 controllers it had been paired with and that are within its reach - in principle an unlimited number.

You chose colors by pushing on the color-wheel. The controllers change color right away and the remote also shows the selected color in the middle of the color wheel. You can also chose various effect-modes.

The T4 remote is the most advanced remote in the T-series, as it has Zone-control and the possibility to program effecs. You can easily divide your conrollers into zones when you pair them with the remote. There is a maximum of 8 zones in the remote, that are easily selected with the numeric keys. All controllers in a zone will then show the same color or effect.

There are two effects modes - a soft color change and a strobe-change. There are 10 preselected colors / combinations to chose between.

The remote has a built-in battery that can easily recharge with the USB port in the bottom. When the battery needs to be charged, the remote will light red. When it is done charging it will light green. A fitting USB cable is included.
