T1 Dimming - Remote for a T1 / T3 Controller

An advanced dimming-system to set the brightness on 12V and 24V LED products, such as the LED stripes.

An advanced dimming-system to set the brightness on 12V and 24V LED products, such as the LED stripes.

The remote is used for controlling the dimming of registered controllers. One remote can, in principle, manage infinite controllers, as long as they are in range. The zone-feature makes it possible to group all those conrollers in up to 8 different zones, so you can control each zone individually. The zones are easily selected using the numeric keypad.

You can choose the dimming-level on the touch-wheel, where after all controllers change right away. There are also fixed settings on 25%, 50%, 75% and 100%, as well as buttons for turning the brightness step up and down. The two memory-buttons make it possible to save two presets for the zones.

The remote has a built-in battery that is easily rechargable with the USB port at the bottom. When the battery needs to be charged, the remote will light red. When it is done charging, it will light green. A fitting USB cable is included.
