Alu-profile, Bardolino, Four Side Profile

An alu-profile with 4 sides for LED stripes and plastic-fronts. It can be used for walls, ceilings or as a hanging lamp.

The name comes from the four sides in the profile, where you can mount LED stripes in. The profile can be used for many purposes, as it can be mounted on walls and ceilings with the brackets or even as a hanging lamp.

You can mount warm-white stripes in all sides or you can make different combinations. In the pictures, we used a RGB+White controller, where the white color-channel controls two warm-white stripes and the RGB-channel is connected to the two RGB stripes.

End caps

The plates are easily screwed on to the end of the FourSide profile to give it a nice finish. Two end plates and four screws are included.

Mounting bracket

The profile can be slided over the bracket or can be clicked on. 2 brackets are included, 2 screws and 2 raw plugs.

Wire suspenders

A complete set for one profile with two wires 150cm, two fixings for profile and two ceiling-mounts. It is easy to mount and it gives a nice touch.

We can also supply alu profiles with stripes mounted, ready for use. Contact us for more information.
