80W Cree LED 10-30V - 7440 Canbus

A very powerful 7440 / W21W LED bulb with 16 x 5W CREE LEDs. The light matches a 40W incandescent bulb.

A very powerful 7440 LED bulb with 16 x 5W CREE LEDs. The light matches a 40W incandescent bulb.

The light from the 12 LEDs on the side makes the bulb to illuminate both the back and the front. The 4 LEDs at the front also create a bright beam straight forward. This combination creates a good light-scattering in the reflector of the lamp.

The actual power consumtion is 8-10W and the Xenon-white color is about 6000K.

The LED bulbs are made, so that you avoid bulb check errors on most new cars. Although, certain models do not accept the bulbs and so it might be necessary with external resistors.

You can of course also use these bulbs in olders cars without canbus / light control.
