CRI 95 LED Stripe, Splashproof, 5m - 12V

Splashproof LED stripes in intervals of 5 metres. Powerful warm white LEDs that have an extra high color reproduction (RA/CRI 95).

Splashproof LED stripes that are sold in intervals of 5 metres. The powerful warm white LEDs have an extra high color reproduction (CRI 95). The stripe is covered in a layer of plastic, which protects the strip against splashes and fingers.

The strip is made of smaller circuits, which make it possible to cut the stripe in smaller pieces. There are clear markings on the stripe where it can be cut.

On the back is a powerful 3M tape that is used to mount the tape.

High CRI = Quaility light

CRI is the measurement for color reproduction and tells you how well the light source lights up the different colors. If you need to light something up with many different colors, it is always an advantage to pick a light source with a high CRI.
