80W CREE LED 10-30V - BAY15D Canbus

A very bright BAY15D bulb with 16 powerful 5W LEDs from CREE. Special optics create a wide light beam. It is quivalent to a 40W incandescent bulb.

A very bright BAY15D bulb with 16 powerful 5W LEDs from CREE. Special optics create a wide light beam. The bulb has a built-in high and low beam function, where the low beam brightness is equivalent to 10W and the high beam is equivalent to 40W. An original BAY15D is 5W and 21W, so this bulb has a quite strong beam. The real consumption of the bulb is 8~10W.

The xenon-white color is 6000K.

Because of the naturally high consumption, most cars avoid problems with their bulb-control / canbus. In some sensitive cars it might be necessary to use external resistors to disable the errors.

You can also use the bulb in cars without bulb-control.

Dimensions
L: 54mm x Ø: 18mm
