H4 Canbus, (80W) LED, 10-30V

A powerful LED bulb with 16 very bright 5W LEDs that give you plenty of light. Fits in to the original sockets.

A powerful LED bulb with 16 very bright 5W LEDs that give you plenty of light, equivalent to a 40W incandescent one. The bulb fits in to the original H4 sockets.

The placement of the LEDs give you a wide beam all around the lamp house. There are 12 LEDs all around it and 4 on the top that create a bight beam forward.

The real consumption of the bulb is 8-10W. The high consumption makes it possibe to avoid canbus resistors and to avoid bulb check errors on most cars. With some models it might still be necessary with external resistors.

The bulbs can of course be used on older cars with no bulb check.
