Matronics Neon top lamp for Volvo 2012+ Type 2

LED lamps for the top of Volvo FH Globetrotter and Globetrotter XL. They are available in single and dual color.

Position lights for the top of Volvo FH Globetrotter and Globetrotter XL, where they are placed behind a transparent glass. The complete set consists of a Matronics Neon marker light, that is fastened on to the included plastic-base. The base is clicked on to the truck as the original.

An original connector is not included, so you can either connect a MCP 2.8K 2 pin male connector, or cut the original connector off. There is a 1 meter cable on the Neon lamp.

Dual color models

Dual color corner-lamps change between yellow and white light, by swapping plus and minus. This requires changing the original wiring, and is controlled with a color changer controller or a 2-pole switch.

Extra neon lamps

The Neon lamps can also be bought seperatly, if you wish to use them elsewhere on the truck.
