Very powerful LED headlight kits, available for H4, H7, H8, H9, H11, H13, H15, H16, HB3 and HIR2 sockets. The kits are complete with two emitters, two power suppliers and cable sets for replacing the original emitters.

For cars with bulb-control, it is also possible to purchase Canbus kits for 12V and 24V.

Large light output

Depending on the socket the light output is between 1600 lumen to 2800 lumen pr. LED

Cooling

H4, H7, H8/9/11/16, HB1, HB3. HB4 and HIR2 has a aluminium housing with special flexible cooling elements that allow the bulb optimal cooling in minimal space on. H15 has an built-in fan for cooling.

After the bulb is mounted, blades are bent out, so you get as much air through as possible. Although there is little space for the bulb, it should be possible to place the cooling blades.

Mounting

The H7 bulb can be adjusted in the socket with the included allen key, this may be necessary for a better light cone.

CANBUS / Pear Control

For some cars, it may be necessary to go with canbus kits to avoid error messages on the car lamp control. Unfortunately we experience that on several VOLVO trucks the computer CANNOT be cheated and here these CAN-BUS modules will not have the correct function.
