Touch Dimmer for Wood and Plastic - 12~24VDC 4A

Dimmer that is mounted on the backside of wood or glass-sheets, where it can register touch through the material. Up to 30mm.

Dimmer that is mounted on the backside of wood or glass-sheets, where it can register touch through the material. It can be mounted on surfaces with up to 30mm thickness, for example tables, doors, etc. This makes it possible to do a completely invisible installation.

A short push toggles it on and off, while a long press will make the brightness go up or down.

It is easily mounted with the double-adhesive tape and to be connected with the DC-plugs.
