H8 / H11 Canbus, 80W CREE LED, 10-30V

A powerful H8 / H11 LED bulb. The LED creates a very bright light.

A powerful H8 / H11 LED bulb with 16 x 5W LEDs = 80W LED Power.

The light corresponds only to about 40W incandescent bulb, so it will not be as powerful as the normal H-bulb.

The special optics on the sides of the 12 LEDs are making the bulb to illuminate both the rear and the side. The 4 LEDs in the front are also producing a very bright light ahead. Altogether, they provide a nice wide light that spreads throughout the lamp reflector.

The Xenon-white color is around 6000K.

The bulbs can be used on most cars with Canbus, but since the power consumption is only around 8W, it may continue to occur error messages. If you are unsure whether it is enough, we recommend buying external cheat resistors.

Naturally, you can also use LED bulbs in older cars without canbus / lamp control.
