Matronics LED Headlight Kit adapters

Various adapters and clips that can be used with our LED headlight kits.

Some cars have a special socket or adapter, which holds the halogen bulbs in place, as headlamps. This can be a challenge, when it comes to the LED retrofit kit, as LED lamps typically have a larger base and require space for the cooling plates. Here, we have obtained various LED adapters, which are suitable for larger LED bulb dimensions, so you can mount them in a wide range of cars.

Note that these are only adapters for attaching the bulbs, so there can still be challenges around the connection's signal.

We can not be certain that these adapters are also suitable for other models than we have listed below.
