Insulated probe for 4mm socket

Practical probe that is protected with a plastic cape, that automatically pushes back. Secured against short circuits.

Practical probe that is protected with a plastic cape, that automatically pushes back. The cape protects against unintended short circuits. There is also a built-in fuse in the handle, that is easily replaced.

The tip of the probe is made as a 4mm plug, so you can actually connect eg. a cable or Crocodile clips in the end of it. This means you do not have to disconnect the probe if you need other equipment!

The probe ca be used for measurements, but also to supply power to components and circuits, eg. for testing LEDs or small circuits.

EN61010 1000V CAT III
