Serie 30 - Straight joint

Strong solid alu-bar that fits in to 8mm series 30 slots. The bar is tightened between two profiles to join them.

Strong solid alu-bar that fits in to 8mm series 30 slots. The bar is tightened between two profiles to join them. There are 4 pinol-screws that are used to fasten the bar.

The bar should be mounted on opposite sites of a bending force, so that the force is translated in to a pull in the bar. Even better is a bar on both sides of a joint.
